

FUEL SYSTEMS MANUFACTURING FACILITY CUMMINS

CLIENT

CUMMINS

LOCATION

CIUDAD JUAREZ, MEXICO

ROLE

PROJECT MANAGEMENT

PROJECT

255,000 SQ FT

Cummins is one of the world's largest diesel engines and power generation company's. They are globally renown for design, manufacture, service and distribution companies or diesel engines, components and related items.

ECM was hired for Project Management services for the construction of their new 120,000sf Fuel Systems manufacturing facility in Cd. Juarez, Mexico. The Fuel Systems group produces and remanufactures fuel injector units, electronic control modules and associated items. Success of this plant was immediate and generated the need for a 75,000 sf addition. ECM International was retained as the project manager for this expansion.

In a matter of months, high demand led Cummins to again expand their production and ECM was brought in to provide full-service Project Management for this 60,000 sf enlargement.

ECM builds successful projects and long-term client relationships in a wide-range of industrial sectors.
