**CLIENT**

EL PASO WATER

**LOCATION**

EL PASO, TEXAS

**ROLE**

PROGRAM MANAGEMENT

**PROJECT**

73,000 TSF  
\$20 MILLION

El Paso Water (formerly EPWU) is the agency chartered by the City of El Paso (COEP) all manage all aspects of water, wastewater and stormwater for the metropolitan area.

In order to improve its operation, EPWU decided to establish the Field Service Operations Yard which consolidated five of their far-flung operations - Administration, Fleet Maintenance Facility, Warehouse and Meter Repair Shop, Water Production and Water Distribution - facilities to a single, convenient 20 acres campus.

ECM provided comprehensive full-time, onsite project management and additional office support including scope analysis, scheduling and constructability reviews. ECM’s coordination role was critical in maintaining proper communication flow between with multiple EPWU departments and stakeholders as well as design, construction and other project personnel.

ECM has been the “go-to” Project Manager for many government institutions and has completed a vast array of projects including aviation, office, recreation, transit and utility.
