

# LANDING SYSTEMS MANUFACTURING FACILITY SAFRAN GROUP

## CLIENT

SAFRAN GROUP  
VESTA

## LOCATION

QUERETARO, MEXICO

## ROLE

PROJECT AND CONSTRUCTION MANAGEMENT

## PROJECT

\$ 12 MILLION

ECM International has a long and accomplished track record of leading complex manufacturing projects for industrial firms across the globe.

The SAFRAN Group, a French aviation, aerospace and security group, hired ECM to direct the program for their newest plant near Queretaro, Mexico. This facility was for their Safran Landing Systems division (formerly called Messier-Dowty), and is designed for the manufacturing of landing systems for the Airbus A320, A330, and the Boeing 737 jetliners.

ECM provided a full complement of project delivery services for this tilt-up wall facility. Value engineering and cost control was a continual focus from the bid evaluation stage throughout construction. Team-wide coordination, creativity and diligence led to a remarkable total construction time of only 8 months from concept to substantial completion.
